

SOTT NexGen Ultimate PremiumPlus™ offers every installer the freedom and ability to deliver a perfect installation without compromises that is finely finished in smallest detail. This high-grade cast film has many special characteristics that make it the best car wrap film in the world in the opinion of many car wrappers. Here is a summary of the facts:

IMPROVED COLORS

The colors of the new UPP are improved, show more intense hue and depth and are closer to real car paint than ever.

ASP Autostyling, Poland

CORRECTIONS

You can apply the film, squeegee it and pull it away again without changing or activating the adhesive structure. Even if the film was stretched, you can heat it up and make it return to its original shape and size, ready to be reapplied. The adhesive layer will be undamaged.

Cam Shaft, Germany

PRESSURE LINES AND SQUEEGEE MARKS

In contrast to many other films, this film shows practically no pressure lines in the adhesive during installation and stretching. Any lines in the surface of matte films will disappear when heated up.

Speedrage, Netherlands

COLOR, STRUCTURE AND SHARP CREASES

The color of the film often changes when it is stretched. This is a consequence of the pigmentation of the pvc during production. SOTT takes this into account and makes sure that this effect is kept to a minimum or even entirely prevented. This keeps colors intact, even when stretched extremely into deep channels and over creases.

ASP Autostyling, Poland

CRUMPLE AND UNCRUMPLE

NexGen Ultimate PremiumPlus™ can even be crumpled up and uncrumpled without any visible creases or kinks. Just warm up the film and the creases will disappear like snow in the sun. Even the adhesive layer remains undamaged and ready for use.

Speedrage, Netherlands

CONDITIONS OF SALE

The following is made in lieu of all warranties expressed or implied:

All statements, technical information and recommendations published by SOTT relating to the listed products are based on tests believed to be reliable and within the accuracy of the equipment used to obtain the specific values. There accuracy or completeness is not guaranteed and SOTT makes no warranty with regard thereto. Seller's and manufacturer's only responsibility shall be to replace any quantity of the product proved defective. Seller and manufacturer shall not be liable for injury, loss or damage, direct or consequential, arising out of use or the inability to use the product. Nor shall seller or manufacturer be liable for any costs or expenses incurred in the processing or printing on the product. Before using, user shall determine the suitability of the product for its intended use. User assumes all risk and liability of every nature in connection therewith. No statements or recommendations other than those contained in the technical information published by SOTT shall have force or effect unless contained in an agreement manually signed by the officers of seller and manufacturer.

PRESENTS

NEXT

GENERATION
WRAP FILM

NEXT GEN
Ultimate PremiumPlus™

By the original founders: **SOTT**

In a world where IMAGE, COLOR and QUALITY matter most, SOTT is a leader.

For more than 20 years SOTT has been fully engaged in developing unique vinyl films that stand out from the competition. Colors have to be deeper and more intense and the range of applications wider; installing them should be without problems, anywhere in the world.

The new version of the renowned Ultimate Premium Plus (UPP) series has it all. This new series has nothing to do with the old version other than its name and the original inventors of it: SOTT. A new era for UPP has begun.

This is the next generation of wrap film as it should be.

WE PRESENT

SOTT NexGen Ultimate PremiumPlus™ is extremely conformable and ideal for automotive as well as industrial and marine applications.

SOTT NexGen Ultimate PremiumPlus™ series is a high-quality cast PVC wrap film. This soft, flexible PVC film has special properties, as described below, but one of its main selling points is the possibility to manufacture it in virtually any color, optionally even with the same color depth of exclusive automotive paints.

- Automotive-X™ airchannel adhesive (repositionable, even when firmly applied. Adhesive starts bonding several hours after application). Removable without adhesive residue when film is heated up during removal.
- Can be worked into channels and swages**.
- Structure: MLS™ system (multiple layers incorporated into one film during casting process).
- Color radiance same as car paint
- High gloss rating and color intensity (GLOSS): especially over creases and on curved surfaces.
- Deep color glow (MATT): especially over creases and on curved surfaces.
- The film can infinitely be repositioned, conformed and corrected without affecting adhesive and/or structure of the film.

NOTE: Since certain color effects or color formulas can be difficult to achieve, in some cases a slightly thicker vinyl is used, which makes for a more desirable end result. In most cases this makes the film stronger and less prone to tearing during installation.

** When to apply the SOTT assembly technique. Read: InstallationGuide SOTT-IG-03.

Some colors can have reduced stretchability because of the large amount of metallic pigments.

After application, all film edges and stretched areas must be heat-set (post heated) at 100 -105°C.

• The colors shown above may differ from the original and only serve as an example. The original colors are more smooth and hue. For the actual colors, please refer to your supplier and ask for color swatches. • Durability of each color may vary. Please check our technical datasheet for details. • Colors marked with a # may look slightly different on a dark surface.

W-1120 Chique White

W-1420 Night Crawler

W-1461 Witchblade

W-1540 Topless

W-1465 44-Magnum
